SUMMARY

AI-first Frontend Engineer with 5 years of commercial experience shipping production web apps with Vue 3, Nuxt and TypeScript. AI coding agents (Claude Code, Cursor, Codex) are part of how I deliver every day: I plan the work, set architecture and constraints, let agents generate code, and own the review, testing and quality of every merge. 90% of my projects were in Vue, and I'm comfortable taking on React / Next.js. Growing toward full-stack product engineering.

SKILLS

Core	Vue 2/3, Nuxt, TypeScript, JavaScript, Pinia, Vuex, Vite, Vue Router
UI	Vuetify, Quasar, Tailwind CSS, Figma, Chart.js, AmCharts
Data	REST APIs, WebSockets
Quality	Vitest, Git, Docker, CI/CD, Jira & Confluence, performance, responsive UI
AI	Claude Code, Cursor, Codex, prompt engineering
Languages	Ukrainian (native), English (B1, intermediate)

HOW I WORK WITH AI

- Turn features into clear specs and tasks that agents can execute reliably.
- Maintain project context and rules (component conventions, state patterns, API contracts) so generated code stays consistent.
- Review every AI change like a teammate's PR: types, edge cases, performance, security.
- Use agents for tests, refactoring, migrations and boilerplate; my time goes to architecture and product logic.

EXPERIENCE

Quardex — Front-End Developer

Jul 2021 – Apr 2025

Ukraine

- Designed and maintained scalable frontend architecture across multi-module product UIs.
- Built a reusable component system shared across multiple product modules.
- Integrated Chart.js and AmCharts; improved UI performance, responsiveness, and review quality.
- Worked closely with backend, QA and product: PR reviews, refactoring, performance improvements.

NSOC360 — Front-End Developer (contract via Quardex)

Sep 2021 – Apr 2025

Netherlands · Remote

- Developed UI for a security monitoring and analytics product used by an EU client.
- Built configurable multi-source dashboards: tables, filters, AmCharts charts, permissions, dynamic UI states.
- Migrated parts of a large Vue 2 codebase to Vue 3 within a Vue 2/3 hybrid architecture.
- Introduced unit testing with Vitest to improve frontend reliability.
- Implemented and optimized state management with Vuex and Pinia in an agile remote team.

NDA Startup — Front-End Developer, part-time

Jun 2025 – Apr 2026

Ukraine

- Built the entire frontend from zero to production (Vue, Vuetify, Pinia, REST APIs, WebSockets), including architecture and a reusable component system.
- Developed custom forms/validation and delivered a production-ready UI independently.

Freelance — Front-End Developer

Apr 2025 – Present

Ukraine

- Built a full-cycle admin platform for an auto service covering the complete repair workflow.
- Delivered API layer with AI-assisted development while owning production review quality.
- Added Google integration and CI/CD; owned FE architecture from structure to production.

Open to remote AI-first Frontend / Full-stack roles in product companies and startups: full-time, part-time or contract.
